

Wysiwyg Editor User

If the site administrator has selected the Wysiwig editor as the default at ([Wysiwig Editor Admin](#)), the edit page will look like this:

The screenshot shows the 'Edit: New page' interface. At the top, it says 'Perhaps you are looking for: **HomePage**'. Below this is a tab labeled 'Use normal editor'. The form includes fields for 'Categorize' (with a 'show categories' link), 'Apply template:' (with a 'none' dropdown), and 'Description:'. A rich text editor toolbar is visible below these fields, containing icons for text formatting (bold, italic, underline, strikethrough), alignment, bulleted and numbered lists, indentation, link/unlink, image insert, table insert, and source code. Below the toolbar are dropdown menus for 'Style', 'Font', and 'Size', followed by a 'Source' button.

If not enabled by default, the edit page would show a tab saying "**Use wysiwyg editor**", which would shift the editor from the classical (below) to the visual one (see previous image).

The screenshot shows the 'Edit: New page' interface in classical mode. It has the same header as the previous image. The tab is labeled 'Use wysiwyg editor'. The form includes fields for 'Categorize' (with a 'show categories' link), 'Apply template:' (with a 'none' dropdown), and 'Description:'. Below these is an 'Edit:' section containing a small grid of green icons and a 'Quicktags' button. The rest of the form area is empty.

Shifting from visual editor to viewing html source code

Once using the wysiwyg editor, you can shift from the visual editor to the html source code, for instance, using the corresponding "**source**" button.

Edit: New page

Perhaps you are looking for:
HomePage

Use normal editor

Categorize show categories

Apply template: none ▾

Description:

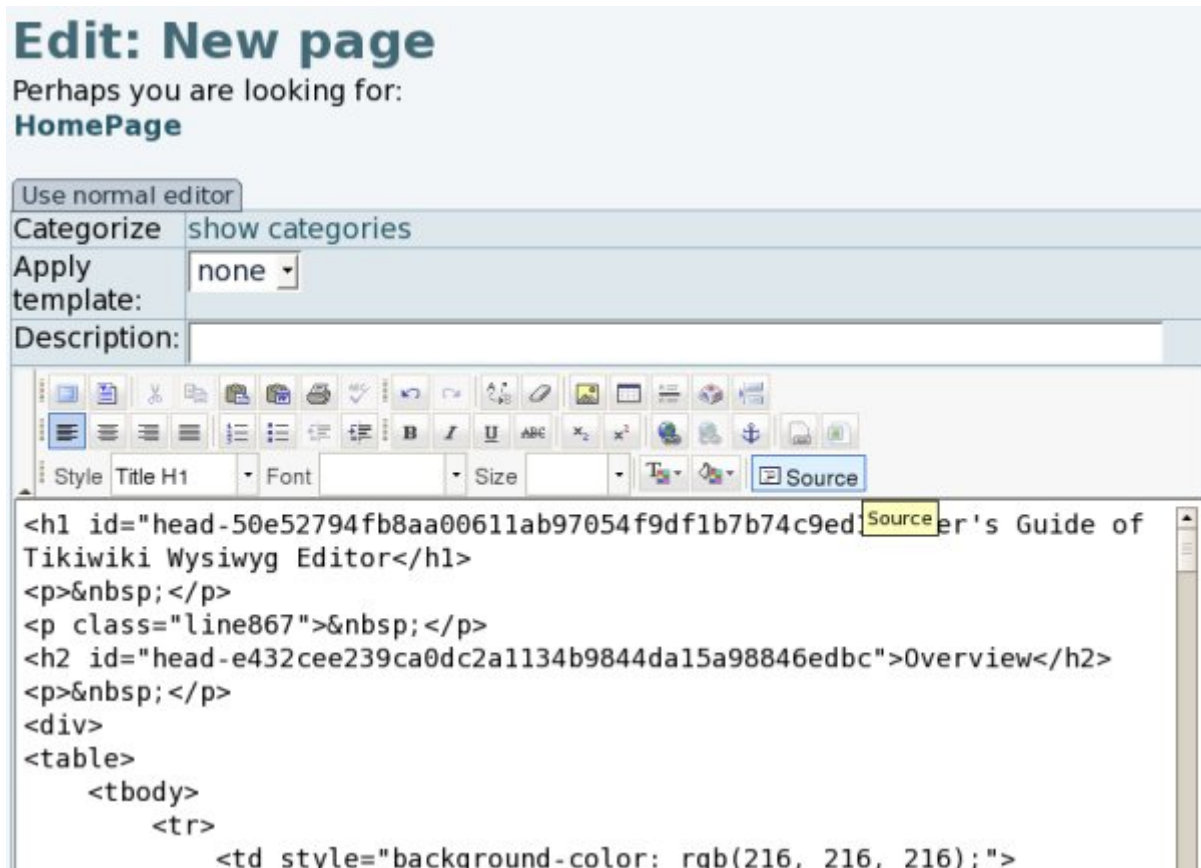

Rich text editor toolbar with icons for undo, redo, bold, italic, underline, link, unlink, list, indent, outdent, and others. Below the icons are dropdown menus for Style (Title H1), Font, and Size, followed by a Source button.

User's Guide of Tikiwiki Wysiwyg Editor

Overview

Icon	What it Does
 Source	View or edit document source code (for advanced users).
	Preview what the HTML page will look like for users.
	Select a layout template. See "Templates" for details.
	Remove the highlighted text... <i>(You must select the text first)</i>

And after pressing at the "source button", the other content (html code) would be shown:

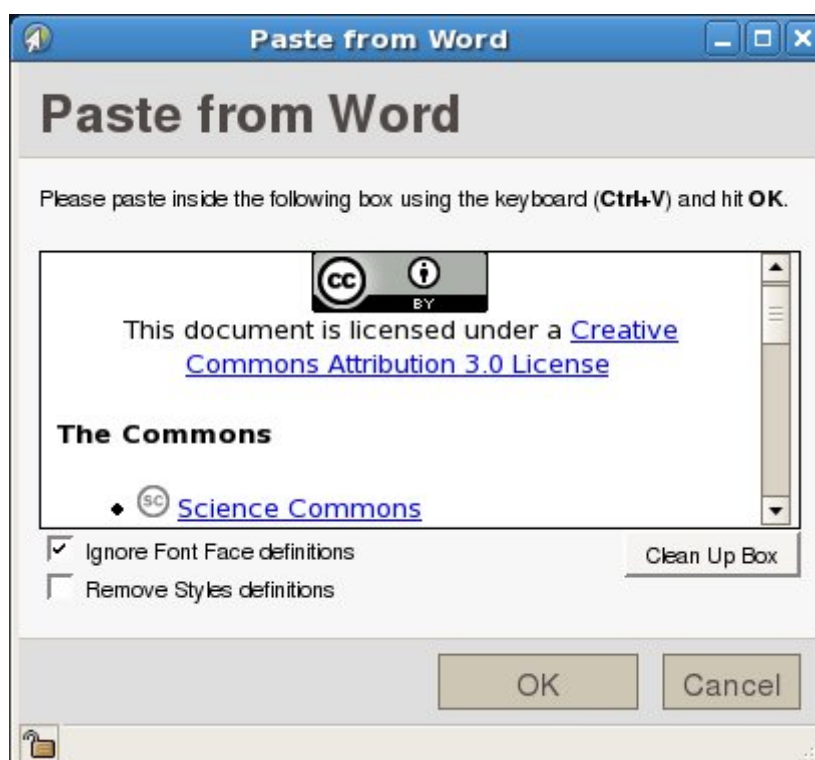

Tiki6: source shown only if the permission is granted

The wiki page edit toolbar in Wysiwyg mode since Tiki6 is now checking if the user has the permission to use HTML (tiki_p_use_HTML), in order to show the "source" button. Similarly, the permission tiki_p_wiki_view_source will be required to allow converting that html into wiki syntax.

Pasting from word processor documents

There is a special feature (and button) to paste content from a word processor program (), which opens a pop up box with a visual text area. Use this to paste the content from your favourite editing program (such as OpenOffice.org Writer, KWord, ... or whatever other closed source alternatives):

Inserting or editing internal Wiki links

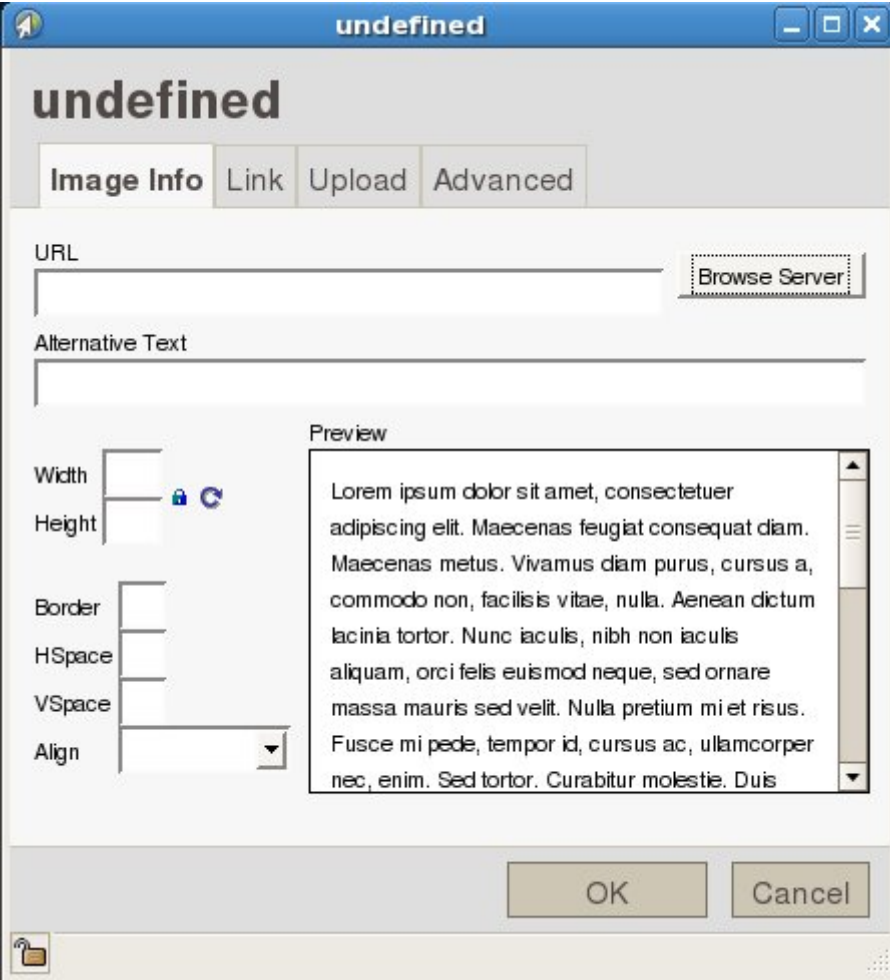

Pressing on the button "Inserting or editing internal Wiki links" (), will open pop up window that will allow you to create links to current wiki pages in the Tiki site.

The dialog box is titled "Tiki Link - Insert internal link". It contains a search bar with the text "Select a Wiki page to link to:" above it. The search bar has a "Find" button. Below the search bar is a list of results, currently showing "HomePage". There are "[prev]" and "[next]" buttons on either side of the list. Below the list are two input fields: "Link" and "Page name". At the bottom right are "OK" and "Cancel" buttons.

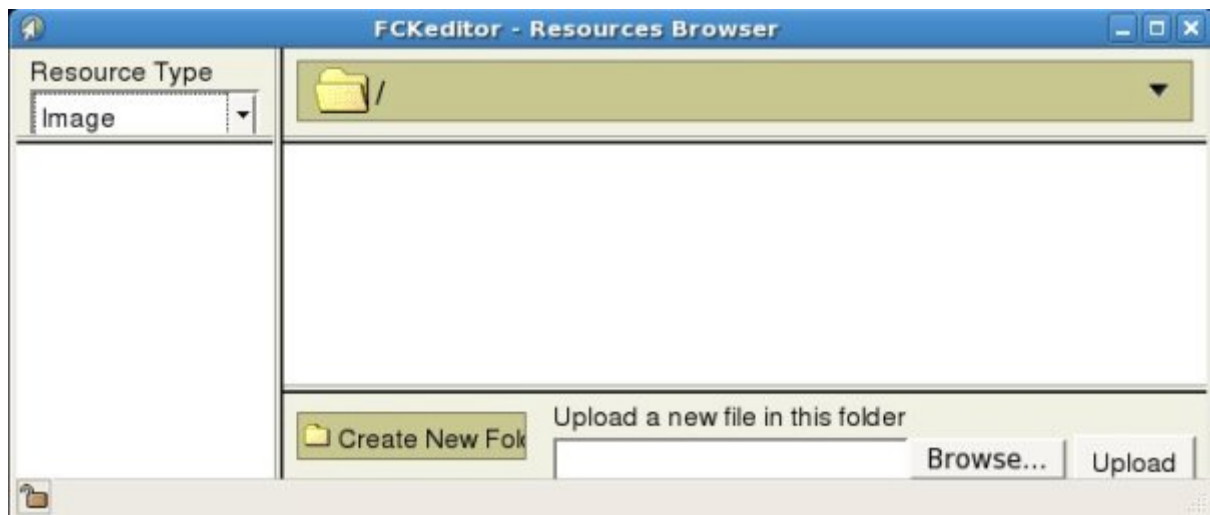

Inserting Tiki images

Pressing on the button "Tiki image" (), will open a pop up window that will allow you to insert images into the page.

The dialog box is titled "undefined". It has four tabs: "Image Info", "Link", "Upload", and "Advanced". The "Image Info" tab is selected. It contains a "URL" input field with a "Browse Server" button next to it. Below the URL field is an "Alternative Text" input field. To the left of the "Preview" area are input fields for "Width", "Height", "Border", "HSpace", "VSpace", and an "Align" dropdown menu. The "Preview" area shows a sample image with placeholder text: "Lorem ipsum dolor sit amet, consectetur adipiscing elit. Maecenas feugiat consequat diam. Maecenas metus. Vivamus diam purus, cursus a, commodo non, facilis vitae, nulla. Aenean dictum iacinia tortor. Nunc iaculis, nibh non iaculis aliquam, orci felis euismod neque, sed ornare massa mauris sed velit. Nulla pretium mi et risus. Fusce mi pede, tempor id, cursus ac, ullamcorper nec, enim. Sed tortor. Curabitur molestie. Duis". At the bottom right are "OK" and "Cancel" buttons.

If you click in the "**Browse server**" button, you'll be able to select images from the tiki site to be inserted in that wiki page.
