

There are many caches in Tiki to improve [Performance](#):

- [Smarty Cache](#)
- [Link Cache](#)
- [Cache External Images](#)
- Wiki Cache (for anonymous visitors, to avoid parsing page again & again)
- Data cache
  - [Memcached](#) when configured,
  - or defaults to filesystem cache
- Opcode/Bytecode offered by PHP
- MySQL also caches queries to improve performance

## Clearing Tiki cache

### GUI

Visit `tiki-admin_system.php` on your site or check [System Admin](#) documentation page.

### CLI

You can also clear the cache from the [command line](#) by doing `php console.php cache:clear`

### Browser cache

Find the documentation for your browser.
