

For each major release, we have a page such as:

- [Tiki27](#)
- [Tiki26](#)
- [Tiki25](#)
- ...

This page is to collaborate on guidelines for these pages.

Goals:

1. Help people decide if they should upgrade
2. Help people understand Tiki (know what it does, and what is evolving)

Sections:

1. Infrastructure
 - Useful, but shouldn't add new features or affect end users (Smarty, jQuery, build system PHPUnit..., refactoring)
2. Enhancement
 - New feature (big or small), (UI / UX improvement), replacements (which affect end user), notable bug fixes, etc.
3. Removals
4. Upgrade notes
 - Known issues / regressions which may prevent you from upgrading / a change which may be disruptive
