

Plugin A Link

This [wiki plugin](#), available since Tiki1, creates a link to an anchor in a wiki page. Use in conjunction with [PluginAname](#), which creates the anchor, or link to a wiki heading.

Parameters

Plugin Manager error: alink plugin not found

Example

Aname Plugin Usage

```
{ANAME ( ) }
```

`anchorname` <-put the name of the anchor here. Use this same name for the `aname=` parameter in the Plugin Alink (see just below).

{ANAME}

ANAME example: {ANAME()}anchortname{ANAME}

Alink Plugin Usage

```
{ALINK(
```

```
aname=anchorname <-- put here the name of the anchor you created using the Plugin Aname!
```

 $\left. \right\}$

```
link text <-- put here the text to appear as the link.
```

{ALINK}

ALINK example: `{ALINK(aname=anchorname)}link text{ALINK}`

Demonstration

To jump down to the anchor at the bottom of the page click [HERE](#). <-- Here is where I put the `ALINK` plugin in this page.

.....H.....

Here is a second [link](#) to the same anchor at the bottom of the page. Again, I used the `ALINK` plugin.

•

[illegible]

The anchor is here. <-- I put the `ANAME` plugin at the beginning of this line. Now you can click [HERE](#) to jump to the anchor I put at the top of the page (you can't see where that one is unless you look into the page editor (:biggrin))
