

This produces a list of all [dynamic variables](#) in your Tiki instance.

## Parameters

Plugin Manager error: dynamicvariables plugin not found

## Example

*This code,*

---

```
{dynamicvariables layout="table"}
```

Would produce a list of dynamic variables in a table. We can't do it here on doc.tiki.org because one of the dynamic variables causes a weird redirect. Here is the [Dynamic Variable causing trouble](#) on [PluginDynamicVariablesTest](#).
