

Plugin Fancy List

Use this [wiki plugin](#), introduced in [Tiki3](#), to produce a fancy looking numbered list.

Parameters

Plugin Manager error: fancylist plugin not found

Example

In this example, additional formatting is applied to the items in the list: the double single quotes (`"`) to produce italics, and the two underscores before and after the words (`_`) to make the font bold. See [Wiki Syntax](#) for more information on text formatting.

This code,

```
{FANCYLIST()}"_Antiquity_" "_Middle Ages_" "_Renaissance_" "_Age of Enlightenment_"
"_Romantic Era_" "_20th Century_" "_Present Day_" {FANCYLIST}
```

Would produce:

1. ***Antiquity***
2. ***Middle Ages***
3. ***Renaissance***
4. ***Age of Enlightenment***
5. ***Romantic Era***
6. ***20th Century***
7. ***Present Day***
