

Plugin Group

Use this [wiki plugin](#) to display content based on the user's [groups](#) or friends. It is similar to [PluginPerm](#).

Parameters

Plugin Manager error: group plugin not found

Notes on usage

- The `{ELSE}` part is optional.
- The `groups` and `notgroups` parameters may be used at the same time.
- Groups can be included in other groups, and this can impact how this plugin behaves. For example, if you want a section to be seen by the group A and the group Admins (`groups="Admins|A"`), and not by group B (`notgroups="B"`), be careful not to include group B in the Admins group . If Admins includes A and B, Admins will not see the section.

Examples

Basic syntax

```
{GROUP(groups="Registered|Admins" notgroups="Editors")}show this content for users  
included/excluded from groups specified in the parameters{ELSE}otherwise show this  
content{GROUP}
```

Security

Use of this plugin to hide sensitive information will not prevent it from being revealed to users with permissions to view or edit the page source. Users that have a Watch on the wiki page will receive an email with the entire wiki page source, thus revealing the information regardless whether the content would be hidden because of this plugin.
