

PluginList - Hacks and Fun

A collection of tips, hacks and fun things you can do with [PluginList](#) that don't really belong anywhere else.

Set the Browser Page Title

A client needed a wiki page title (set in the `<head><title>` tag) changed from the default page name, and (eventually) we did it like this:

```
{DIV(class="d-none")}{LIST()} {pagination max="1"} {OUTPUT()}{display name="mytitle"
pagetitle="y"}{OUTPUT} {FORMAT(name="mytitle")}This is the page title, not the wiki page
title{FORMAT} {LIST}{DIV}
```

Make a carousel with wikipages

You need to create some wikipages and set a category to them. In the example it is the category id 22. LIST will load all pages which contain the category and the carousel will display them.

```
{LIST()} {filter type ="wiki page"} {filter categories="22"} {OUTPUT(template="carousel")}
{carousel interval="2000" wrap="true" pause="hover" id="mycarousel" } {body field="page"
mode="raw"} {OUTPUT} {FORMAT(name="page")} {display format="wikiplugin"
name="wikiplugin_include" page="object_id"} {FORMAT} {LIST}
```

Add links to view page with item details or update form in the Bootstrap modal

One needs to add class `click-modal` to the links (buttons) leading to service controller to be displayed in the modal. As there is no working Tracker view item action in the Tracker controller we need to create a wiki page first (in this case named "Item Details") to display the requested item details and use the the Wiki action `_get_page` controller (the Argument variables pref must be enabled for this example to work with `{{itemId}}` arg variable):

```
{LIST()}{pagination max=1}{filter field="tracker_id" exact="1"}{filter field="object_id"
exact="{{itemId}}"}{OUTPUT()} {display default="" name="wikiplugin_img" format="wikiplugin"
fileId="tracker_field_myPictures" default="fileId=4"}{OUTPUT}{ALTERNATE()} {ALTERNATE}
{LIST}
```

Then we just add those two buttons on our listing of items using PluginList:

```
{LIST()} {filter field="tracker_id" exact="1"}{OUTPUT()} ... | <a class="btn btn-primary click-modal"
href="tiki-wiki-get_page?page=Item%20Details&itemId={display
name="object_id"}&modal=1">View Details</a>{GROUP(groups=Admins)} <a class="btn btn-dark
click-modal" href="tiki-tracker-update_item?trackerId=1&itemId={display
name="object_id"}&modal=1">Update Item</a>{GROUP}{OUTPUT} {LIST}
```

...add your tips here!
