

Plugin Markdown

Introduced in [Tiki20](#)

Use this [wiki plugin](#) to parse a page content using Markdown syntax.
CommonMark flavor of Markdown was used for the implementation. See
<https://commonmark.thephpleague.com/>

Coming to [Tiki25](#) and much improved in [Tiki26: Tiki-Flavored Markdown](#)

Parameters

Plugin Manager error: markdown plugin not found

Examples

Example 1

This code:

```
{MARKDOWN()} # This is an h1 tag ## This is an h2 tag ##### This is an h6 tag *This text will be italic* (hard line break after this because of two spaces -->) _This will also be italic_ **This text will be bold** (there's alternative syntax for line break after this parenthesis)\ _This will also be bold__ _You can combine them_ {MARKDOWN}
```

Would produce on this site:

This is an h1 tag

This is an h2 tag

This is an h6 tag

This text will be italic (hard line break after this because of two spaces -->)

This will also be italic

This text will be bold (there's alternative syntax for line break after this parenthesis)

This will also be bold

You **can** combine them
