

Plugin Subscript

Use this [wiki plugin](#) to render characters as subscript text (slightly below the regular line of text and smaller). It is the equivalent of using `<sub></sub>` tags in HTML.

Parameters

Plugin Manager error: sub plugin not found

Examples

Basic Example

This code,

This is regular text{SUB()}and this
is subscript text{SUB}

→

Produces:

This is regular font_{and this is subscript}

Example with Formatted Subscript

This code,

This is regular text{SUB()}*"and this
is italic subscript"*{SUB}

→

Produces:

This is regular text_{and this is italic subscript}
