

Plugin Tracker Prefill

Introduced in [Tiki2](#)

Use this [wiki plugin](#) for [trackers](#) to display a button with a link to a page containing a tracker plugin [PluginTracker](#). In the parameters, you will be able to specify default values for some fields.

Parameters

Plugin Manager error: trackerprefill plugin not found

Example

```
{trackerprefill page="Order" label="Order" field1="2" value1="Shoes" field2="3" value2="10"}
```

The above syntax will create a button labelled "Order" that will link to [tiki-index.php?page=Order&prefills=2:3&values\[\]=Shoes&values\[\]=10](#)

If the wiki page named "Order" contains a tracker plugin with 2 fields (2 and 3), the tracker form will prefill in the fields 2 and 3 values "Shoes" and "10".
