

Wysiwyg Editor Admin

Since [Tiki2](#), Tiki includes a Wysiwyg (*What You See Is What You Get*) editor:  , through the integration of [Fckeditor](#) in the Wiki feature. Since [Tiki6](#), this wysiwyg mode is powered by CKeditor, the new version family of the same engine.

It can be enabled at Admin -> General panel.

Please note that WYSIWYG doesn't work with [Edit by Section](#).

| Description of Wysiwyg Editor Features |                                                                                                                                                                                                                           |
|----------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Wysiwyg Editor is optional:            | If disabled, the normal editor will not be available anymore.                                                                                                                                                             |
| ... and is displayed by default:       | If checked, it will be the default editor when creating or modifying a wiki page.                                                                                                                                         |
| "Content is parsed like a wiki page"   | means all content of the wiki page is parsed, then <u>bold</u> is shown as bold in parsed result, and is still displayed <u>bold</u> in the source of the wiki page. Then you can mix wysiwyg edition and wikistyle code. |
| "Content is partially parsed"          | partial parsing includes: <ul style="list-style-type: none"><li>* parsing of links</li><li>* parsing of images and generally what is included in { }</li><li>* parsing of wikiplugins</li></ul>                           |
| Toolbar skin:                          | It selects the theme styles for icons, colors, etc. used by Wysiwyg editor                                                                                                                                                |

|                  |                                                                                                                                                                                                              |
|------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Toolbar content: | Shows a list of features that will be loaded with the editor. For more information on these features, check the FCKEditor Documentation at <a href="http://www.fckeditor.net/">http://www.fckeditor.net/</a> |
|------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
