

Wysiwyg Editor User

If the site administrator has selected the Wysiwig editor as the default at ([Wysiwyg Editor Admin](#)), the edit page will look like this:

The screenshot shows the 'Edit: New page' interface. At the top, it says 'Perhaps you are looking for: **HomePage**'. Below this is a tab labeled 'Use normal editor'. The form includes fields for 'Categorize' (with a 'show categories' link), 'Apply template:' (with a 'none' dropdown), and 'Description:'. At the bottom, there is a rich text editor toolbar with various icons for text formatting (bold, italic, underline, etc.), alignment, and a 'Source' button to view the HTML code.

If not enabled by default, the edit page would show a tab saying "**Use wysiwyg editor**", which would shift the editor from the classical (below) to the visual one (see previous image).

The screenshot shows the 'Edit: New page' interface in Wysiwyg Editor Admin mode. It features a tab labeled 'Use wysiwyg editor'. The form includes fields for 'Categorize' (with a 'show categories' link), 'Apply template:' (with a 'none' dropdown), and 'Description:'. Below these is an 'Edit:' section with a visual editor area showing a grid of green squares. At the bottom, there is a 'Quicktags' section with a plus icon and a list of tags.

Shifting from visual editor to viewing html source code

Once using the wysiwyg editor, you can shift from the visual editor to the html source code, for instance, using the corresponding "**source**" button.

Edit: New page

Perhaps you are looking for:
HomePage

Use normal editor

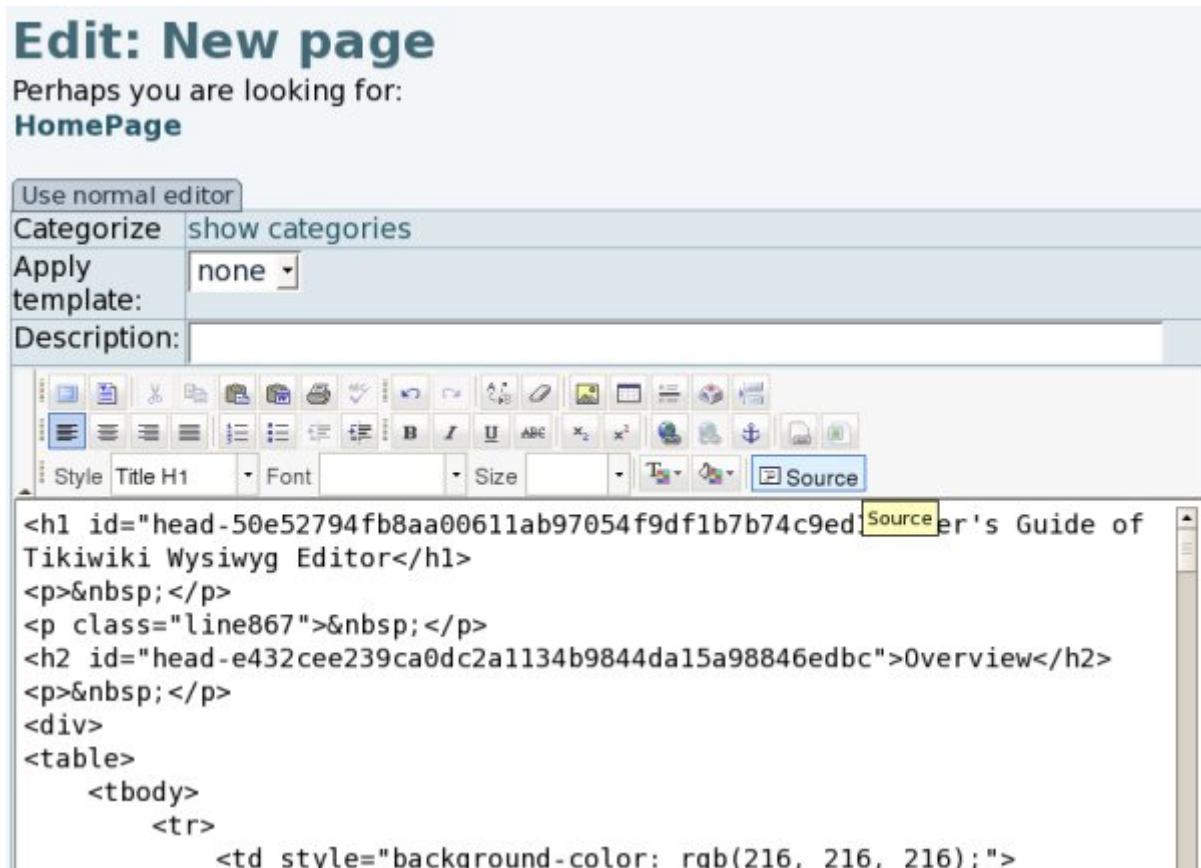

Categorize show categories

Apply template: none ▾

Description:

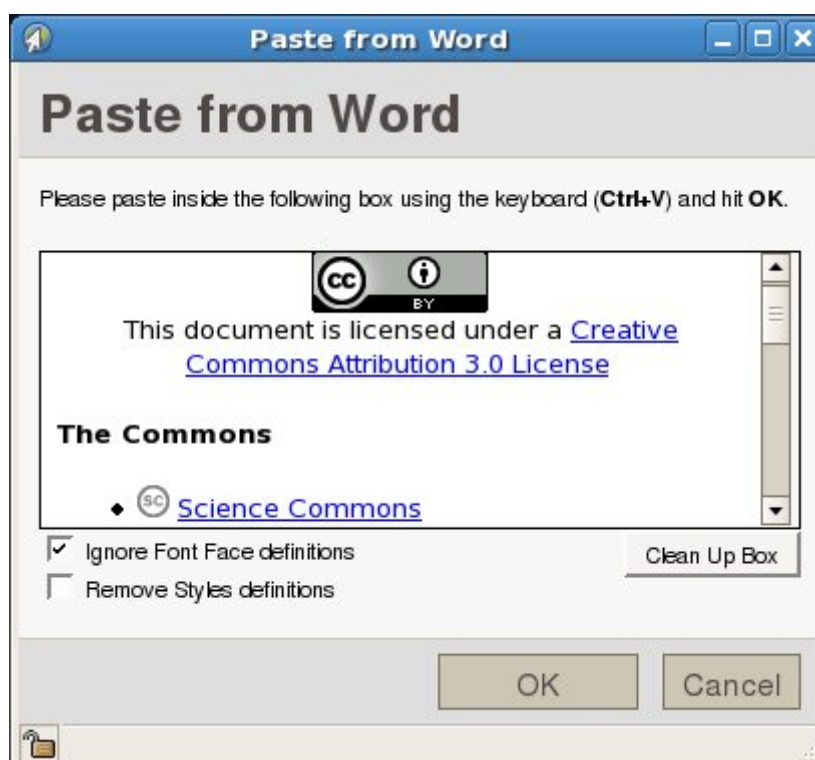

Tiki6: source shown only if the permission is granted

The wiki page edit toolbar in Wysiwyg mode since Tiki6 is now checking if the user has the permission to use HTML (tiki_p_use_HTML), in order to show the "source" button. Similarly, the permission tiki_p_wiki_view_source will be required to allow converting that html into wiki syntax.

Pasting from word processor documents

There is a special feature (and button) to paste content from a word processor program (), which opens a pop up box with a visual text area. Use this to paste the content from your favourite editing program (such as OpenOffice.org Writer, KWord, ... or whatever other closed source alternatives):

Inserting or editing internal Wiki links

Pressing on the button "Inserting or editing internal Wiki links" (), will open pop up window that will allow you to create links to current wiki pages in the Tiki site.

The dialog box is titled "Tiki Link - Insert internal link". It contains a search bar with the text "Find" and a "find" button. Below the search bar is a list of results, currently showing "HomePage". There are also fields for "Link" and "Page name". At the bottom are "OK" and "Cancel" buttons.

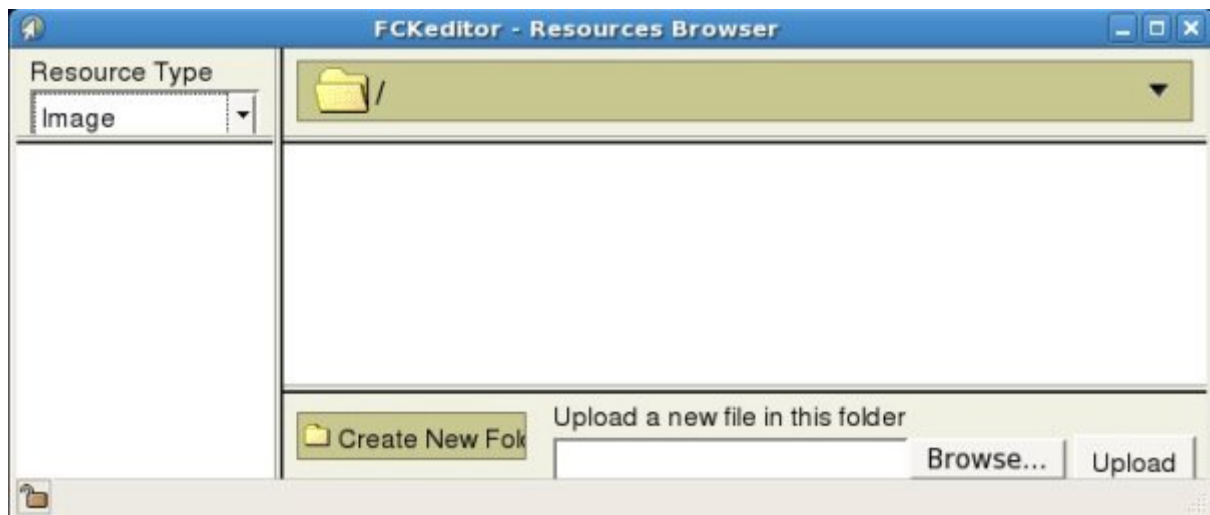

Inserting Tiki images

Pressing on the button "Tiki image" (), will open a pop up window that will allow you to insert images into the page.

The dialog box is titled "undefined". It has tabs for "Image Info", "Link", "Upload", and "Advanced". The "Image Info" tab is selected. It contains fields for "URL" (with a "Browse Server" button), "Alternative Text", "Width", "Height", "Border", "HSpace", "VSpace", and "Align". There is a "Preview" section showing a sample text block. At the bottom are "OK" and "Cancel" buttons.

If you click in the "**Browse server**" button, you'll be able to select images from the tiki site to be inserted in that wiki page.
