

Module Record RTC

This [Module](#) captures audio and video in real-time for seamless collaboration as part of [Record screen audio video](#)

Usage

To use module **Record RTC** in a wiki page:

```
{module module="recordrtc"}
```

Capture audio and video in real-time for seamless collaboration

[Go to the source code](#)

Preferences required: fgal_use_record_rtc_screen

Parameters

no parameters

Example

So, using the previous code in a wiki page would produce on this site a form to allow you start recording

The screenshot shows a user interface for the 'Record RTC' module. It features a title bar 'Record RTC'. Below it are two input fields: 'Record name' and 'Screen'. A large blue button with a video camera icon and the text 'Start recording' is centered. At the bottom left, there is a checkbox labeled 'Auto-upload'.

All you need is providing a name for your record, and select what you need to record, whether it's your screen, mic, screen and mic, or camera and mic, and start recording.

Note also that you can auto-upload your record or not.
