

## Category Tracker Field

The field type enables you to assign one or more categories to a tracker item.

The categories that are displayed are the children of one category. This parent category must be identified by its category ID.

Once tracker item is categorized, it inherits [Category Permissions](#) if applicable as per [Permission Enforcement Order](#)

## Options

*The jQuery Sortable Tables feature must be activated for the sort feature to work.*

## Note

Removing a tracker's category field does not uncategorise the items. This should be done manually before removing the field or using category admin afterwards.

## Old pre 7.x notes

[\[+\]](#)

## Style

The div that contains the selec all button has a class `.categSelectAll`

## Category Browsing

The main field of the tracker item will be displayed in the categories browsing.
